

Command	Explanation	Package
help()	shows documentation for command	rio
getwd()	shows present working directory	
setwd()	sets working directory	
install.packages()	installs R packages	
library()	loads packages for use	
import()	imports data	
edit()	lets you edit the data frame	
c()	combines inputs into a vector	

Examples

```
help(setwd)
```

Shows the documentation for the `setwd` command.

```
setwd("C:/Users/bigwilly/Documents/ECN102")
```

Sets the present working directory to `C:/Users/bigwilly/Documents/ECN102`.

```
install.packages("rio")
```

Installs the `rio` package, which makes importing data a lot easier.

```
library("rio")
```

Loads the `rio` package so you can actually use it.

```
dataframe <- import("data.csv")
```

Imports data from file `data.csv` into data frame `dataframe`.

```
newdf <- edit(dataframe)
```

Allows you to edit the data frame `dataframe` and saves it as `newdf`.

```
testvector <- c(1, 6, 3, 7)
```

Creates a vector called `testvector` with values 1, 6, 3, 7.
